PROFESSIONAL SUMMARY

Full-stack software developer with strong experience building geospatial and asset management systems for public infrastructure and municipal operations. Core expertise in C#, .NET, enterprise GIS (ArcGIS Pro, ArcMap, Experience Builder), cartographic production (layouts, print/PDF, map series, symbology for non-GIS readers), ArcPy/Python geoprocessing automation, and API-driven system integration.

Extensive experience working with Siebel, 311, and Cityworks AMS systems to automate service requests, inspections, and operational workflows for departments such as Tree Management and DOT/Highway services.

Experienced in using SQL and Python for data processing, validation, quality assurance, and automation in data-intensive applications, including large-scale GIS and asset data.

Regularly responsible for end-to-end system delivery, including backend logic, database design, data integrity and monitoring, authentication and authorization integration, secure API communication, application deployment, and modernization of legacy .NET applications. Also produces ArcGIS Pro cartographic deliverables (layouts, print/PDF, template-driven map series), automates geoprocessing with ArcPy and Python including raster and Spatial Analyst tools where analysis requires them, and presents maps and spatial analysis through training sessions, demos, and briefings to mixed audiences.

EXPERIENCE

Full-Stack .NET & GIS Developer

Dec 2023 – Present

DZ CIS LLC — Remote

Intern — training and foundation (Dec 2023 – Feb 2024)

- Joined initially in a trainee/intern capacity, receiving hands-on training in Cityworks AMS, enterprise GIS workflows, ArcGIS Pro, and geodatabase structures.
- Assisted senior developers with backend (.NET, SQL) and frontend (map-based web interfaces) tasks, supporting existing asset management and service request applications.
- Gained practical experience working with geospatial datasets, service request lifecycles (311), and municipal infrastructure systems.

Junior full-stack developer (Mar 2024 – Nov 2024)

- Developed full-stack enterprise applications for geospatial asset management, integrating Google Maps API, .NET MVC, and ArcGIS services to support Tree Management, 311/Pothole Systems, and DOT/Highway operations.
- Engineered interactive, map-driven tools featuring custom marker logic, clustering, radius-based filtering, overlays, and location-based search.

- Automated and optimized workflows within Cityworks AMS, building API-integrated solutions for service request creation, inspections, and fieldwork coordination.
- Integrated RESTful services to enable communication between Cityworks, Siebel 311, ArcGIS Feature Services, and internal databases.
- Designed, built, and maintained enterprise geodatabases, ensuring data integrity, schema consistency, and operational readiness.
- Performed geospatial analysis, spatial queries, data cleaning, validation, and QA/QC using SQL and Python to support reliable, data-driven decision-making.
- Developed modular and scalable backend logic in C#/.NET, implementing asynchronous operations and structured controller patterns for performance and maintainability.
- Produced ArcGIS Pro layouts and print/PDF cartographic products for reports and briefings, including template-driven map series; applied style guidance and symbology/labeling suited to non-GIS audiences.
- Automated geoprocessing with ArcPy and Python; used raster and Spatial Analyst tools where project analysis required. Delivered training, demos, and briefings presenting maps and spatial analysis to stakeholders.
- Produced technical documentation, workflow diagrams, and user guides to support system delivery, onboarding, and long-term maintenance.

Senior full-stack developer (Dec 2024 – Nov 2025)

- Modernized legacy .NET applications through framework upgrades and structured release/versioning.
- Led end-to-end delivery of ASP.NET Core MVC/Razor applications, aligning JavaScript UI behavior with API and service-layer contracts.
- Managed IIS-hosted deployments and environment-specific configuration with production stability focus.
- Resolved production authentication and integration issues across Entra ID (OIDC), cookie/session middleware, API gateway contracts, and reverse-proxy callback/header behavior, including explicit 401/403 handling for AJAX clients.
- Owned request/response contract alignment across frontend payloads, controller DTOs, service mappings, and SQL persistence for multi-step business workflows.
- Executed safe schema and configuration evolution (additive DB changes, backward-compatible config cleanup, environment-key governance) without service disruption.

Team lead (Dec 2025 – Present)

- Lead delivery across web, API, and desktop (.NET) workstreams; technical leadership across GIS and .NET projects.
- Led a dedicated team building ArcGIS Experience Builder applications for custom operational systems.
- Designed and implemented an internal team management system to support task tracking and coordination.
- Led internal training and onboarding; presentations on map products and spatial analysis to stakeholders.
- Drove release reliability through smoke and regression checks on core workflows before production delivery.

- Agile/Scrum delivery in a remote cross-functional team under Time and Materials engagement.

SKILLS AND QUALIFICATIONS

Software development and backend

- C# / .NET (MVC, Windows Forms, ASP.NET Core, Web API)
- Backend architecture, asynchronous processing, controller-based design
- Application lifecycle management and legacy system modernization

Web, map-driven applications, and GIS

- JavaScript for interactive, map-driven web applications
- HTML/CSS as supporting technologies for UI integration
- ArcGIS Pro, ArcMap, ArcGIS Online, ArcGIS Experience Builder
- Custom Experience Builder widgets and GIS-focused web applications
- Google Maps API (markers, clustering, overlays, geofencing, search)
- Enterprise geospatial data handling and projection awareness

Cartography, geoprocessing automation, and stakeholder communication

- ArcGIS Pro and ArcMap layouts and print/PDF map products for reports and briefings; template-driven map series; symbology and labeling for non-GIS audiences; style-guide-aligned output where required
- Raster geoprocessing and Spatial Analyst tools as needed for analysis tasks (e.g. Raster Calculator, Extract by Mask, and related operations)
- ArcPy and Python for automated, repeatable geoprocessing and batch workflows
- Training sessions, demos, and briefings presenting maps and spatial analysis to technical and non-technical stakeholders

Asset management and municipal systems

- Cityworks AMS (workflow automation, inspections, service requests)
- 311 and Siebel integrations for municipal and infrastructure operations
- Tree Management and DOT/Highway asset systems

Data processing and quality

- SQL (spatial and non-spatial queries, data validation, integrity)
- Python and ArcPy for data processing, cleaning, QA/QC, geoprocessing automation, and scripting in GIS environments
- Data reliability and monitoring in production GIS environments

System integration, security, and deployment

- REST APIs and system-to-system integration
- Authentication and authorization integration (SSO, Entra ID, certificates)
- Secure API communication and API management practices
- IIS deployment, environment configuration, and production stability
- Agile/Scrum delivery, Time & Materials contract environments
- Technical documentation, workflow diagrams, and knowledge transfer

Technologies

- C#, ASP.NET Core MVC (.NET 6/7/8), ASP.NET Core Web API, Entity Framework Core
- JavaScript, HTML/CSS, Python, SQL Server, Windows Forms
- ArcGIS Pro, ArcMap, ArcGIS Experience Builder, Google Maps API, Cityworks AMS
- Visual Studio, Postman, Microsoft Office

RESEARCH AND GRADUATE PROJECTS

Zürich Tree Management (University of Łódź)

Municipal tree service-request workflow from map intake through inspection to closure; City of Zürich open Baumkataster (WFS); ASP.NET Core.

GEOINT Crisis Zones

Mapping of 7,794 ACLED events in Poland (2020–2024) with filters, charts, and evaluated city-level forecasts; ASP.NET Core 8, Google Maps.

Water Leak Monitoring Dashboard

Infrastructure GIS demonstrator with synthetic SCADA readings, zone-level risk scoring, and persisted operator incident workflow.

Urban Heat Island — Łódź

Sentinel-2 NDVI and Landsat-8 LST on a 500 m grid; Google Earth Engine pipeline; Leaflet web map.

GeoLineage

File-based lineage receipts for STAC → GeoParquet pipelines; minimum recompute; Streamlit UI; Python.

EDUCATION

Master of Science in Mathematics and Computer Science

2025 – Present

University of Łódź, Poland

Bachelor of Science in Mathematics and Computer Science

Oct 2021 – July 2025

University of Łódź, Poland

Thesis: “Application using Geospatial Intelligence (GEOINT) to map and analyze geographic data” — web-based GIS for conflict prediction and asset management. Full-time studies in English.
